

# 12 good reasons to ask for LTC's pre-assembled Greenfield whips

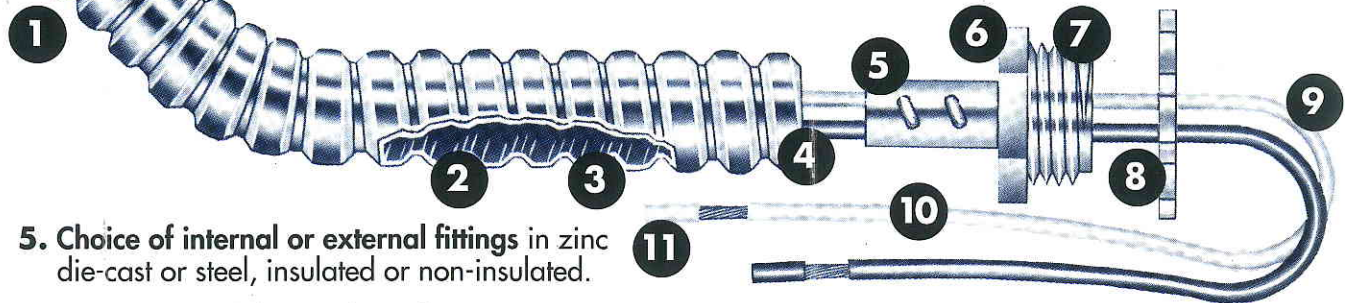

## LTC's exclusive Greenfield whips exceed minimal compliance...

We're not content to merely meet UL standards. We produce Greenfield whips that achieve the upper range of specifications. We use the best components available; precision-machined cutting; highest quality wiring with conveniently plugged leads; and dependable assembly—they all add up to our unequalled Greenfield whips.

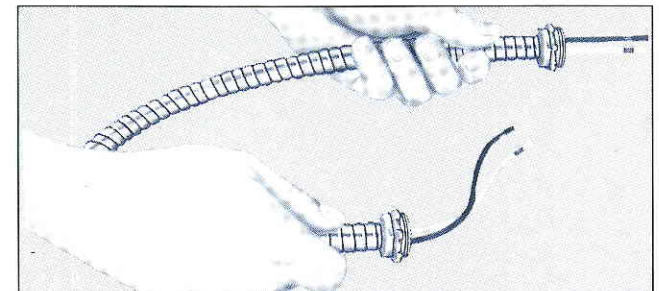

### LTC's pre-assembled Greenfield whips include:

- Flexible steel or aluminum conduit in choice lengths in 3/8" to 3/4" diameters.
- Two internal or external fittings, available in your choice of zinc die-cast or steel, insulated or non-insulated.
- Two heavy-duty steel locknuts.
- Solid or stranded wire (2, 3 — or even 5) with 6" leads and plugged ends (custom leads also available).

1. Flexible steel or aluminum conduit bends easily by hand without use of tools.
2. Extra-thick walls—thicker than other Greenfield conduits for greater strength.
3. Hot dipped coating for better insulation than other Greenfields.
4. State-of-the-art cutting produces de-burred ends for better fit and easier, safer handling.

5. Choice of internal or external fittings in zinc die-cast or steel, insulated or non-insulated.
6. Large hex nuts for a tight seal.
7. Precision threaded ends for secure electrical connections.
8. Rugged steel locknut resists breaking—even when hit.
9. Finest grade wire, solid or stranded, is color-coded and secured in place. Available in 2, 3 — or even 5 wire configuration.
10. 6" leads allow for easy connection (custom leads available to meet your specific needs).
11. Plugged ends make installations faster.
12. UL Listed throughout—each component, as well as the entire assembly.

### Flexible conduit is easier to install

- Choice of super strong steel, or super flexible aluminum with an arc bend radius of only 5°.
- Elbows and offsets are in stock for immediate delivery when needed.
- LTC Greenfield whips are lightweight, clean and easy to work with.

Bring your special requirements to LTC for any flexible connection needed.
